

SIMPLIFIED BUILDING MANAGEMENT
AND MONITORING

Reduce Complexity of Managing Building Systems

Building Management Made Easy

Honeywell WebVision™ lets you manage your small-to-large building HVAC automation systems from a single interface. Monitoring tools are built directly into a controller, so you'll be able to do the work you want to do efficiently and effectively — whether you're onsite or working remotely. All you need is a Web browser and an Ethernet connection.

From the energy savings of using demand limit control to the simplified maintenance using easily accessible information, WebVision is the smart choice for single-building applications.

Versatile and Compatible

Honeywell WebVision doesn't require you to invest in all new controllers and HVAC equipment because it integrates easily with existing ones. So whether you're starting fresh or integrating an existing LON® system of pieces and parts, WebVision offers cost-effective flexibility. In fact, each Honeywell WebVision application supports up to 120 LON HVAC controllers.

With WebVision, you'll be able to monitor and raise alarms on controller points, configure and collect trends, drive scheduled occupancy states, and manage energy use from a single point of entry into the system.

Use With Confidence

Honeywell has taken ease-of-use to a new level with WebVision. Because many tools are bundled into one system, there's a very short learning curve to get up and running. The intuitive graphical user interface provides clear guidance, so when you're charged with managing a single HVAC system, you'll be confident at every step.

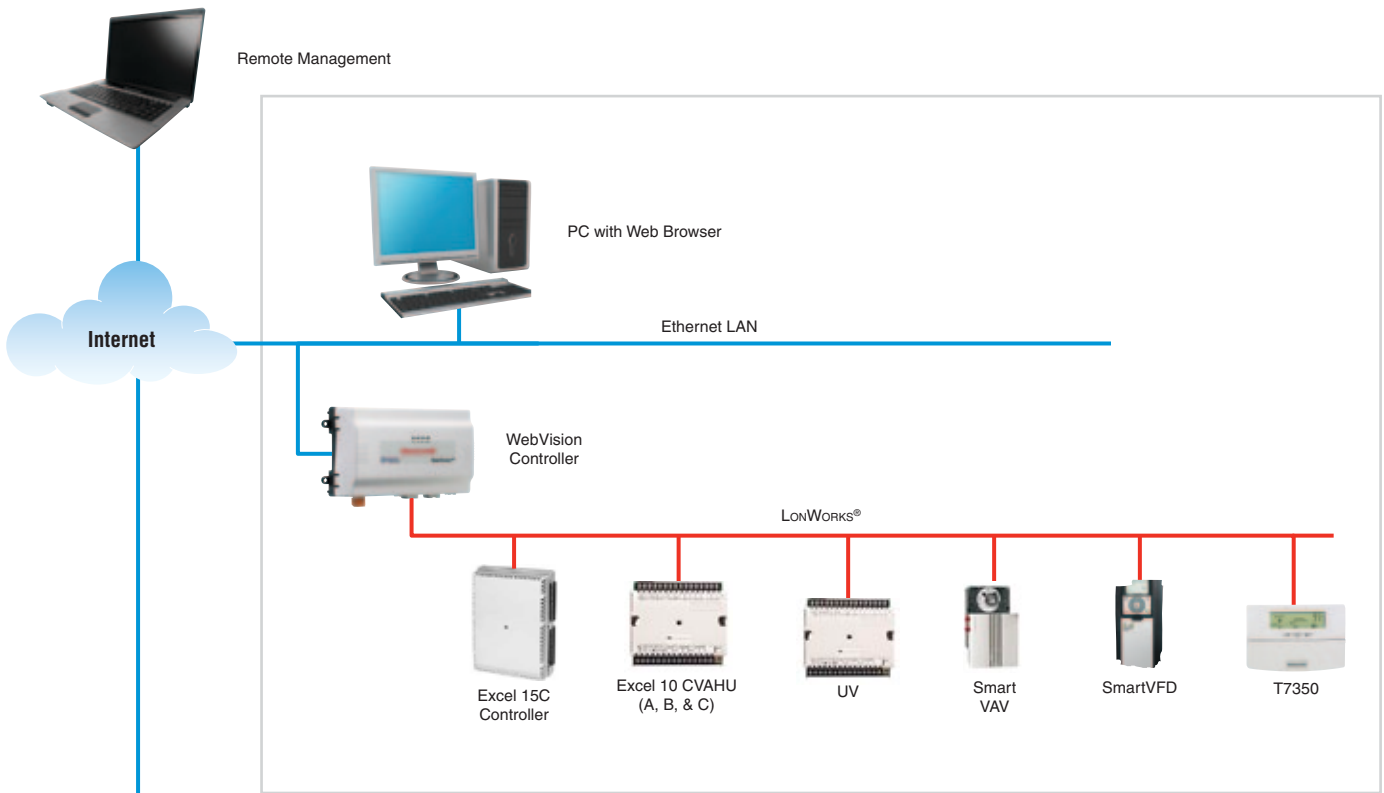

All devices on the control network can be scheduled and monitored with WebVision from any location with an Internet connection. You'll gain system management efficiencies as well as reduce costs by not needing to visit multiple sites.

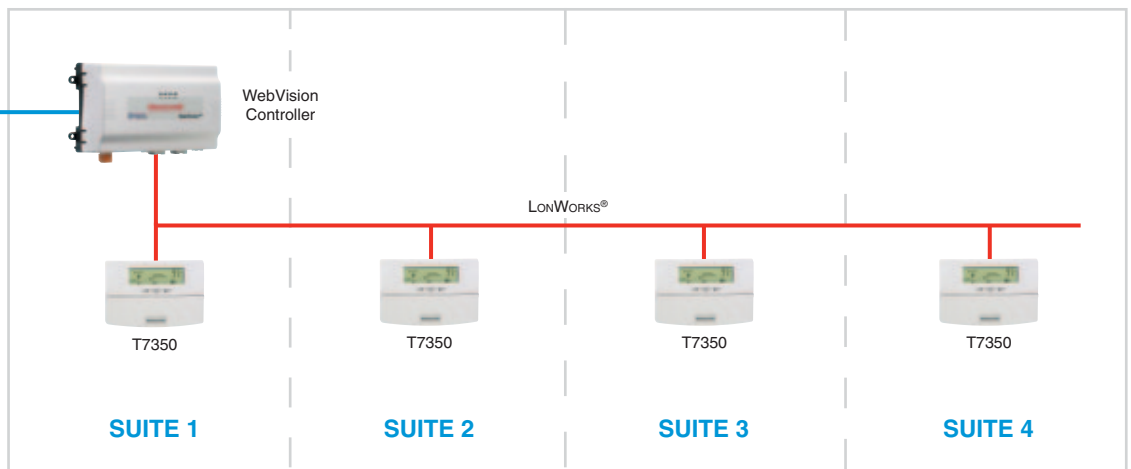

Work With a Honeywell Commercial Automation Contractor

WebVision is the main building system management focus of Honeywell Commercial Automation Contractors (CAC). They're fully trained on WebVision, using built-in tools to reduce installation time, and, most of all, designing an ideal solution for you. For WebVision installation and support, count on your Honeywell CAC.

WebVision Building Integration

Access From Anywhere: Manage local sites from any location with a PC, a Web browser and Internet access.

Multi-Tenant Facility: Each tenant can be provided with permissions for their space while the building manager has full access.

Key Features

DEVICES

Among the many ways that WebVision simplifies the management of building systems is the coordination of all devices into one controller. Your facilities team can manage, control, add, download or replicate multiple HVAC controller configurations on WebVision, giving you easy access to one or many from a single interface.

SCHEDULES

Schedules are weekly calendars defining occupancy mode changes and containing special event information, such as holidays. Schedules can be viewed, added, modified or deleted in WebVision at any time.

ALARMS

WebVision makes it easy to manage alarm activities, including remote access and prioritization to make sure the alarms are sent to the right people at the right time.

TRENDS

The Trends function graphically displays the value points over time. It's a great way for facility managers to look for patterns and make adjustments for energy savings. Trend logs can be saved and viewed later.

GRAPHICS

WebVision comes pre-loaded with default graphics for installed devices. You can also create your own graphics using background images and system information.

USER PROFILES

Create user profiles to control access privileges appropriate to the user type, such as full system control for a system administrator and limited control for a tenant. And a service technician could be assigned a profile allowing access to HVAC equipment during a maintenance call.

ORDERING INFORMATION

OS NUMBER	DESCRIPTION
WWS-VL 1A1000	WebVision Bundle (includes WebVision controller, pre-installed Lon card and power supply)
